

Edwards promotes solutions at NFPA Convention and Expo

*Boston, Mass., USA July 13, 2017*Print

The National Fire Protection Association (NFPA) is the leading standards organization in the fire safety industry.

Each year, the NFPA sponsors an annual conference and expo where industry fire and safety experts come together to share ideas, propose new standards and improve existing standards to make the world safer from the threat of fire and other related hazards.

Edwards highlighted solutions for engaged customers.

Edwards highlighted its Incident Management solution demonstrating the combination of its Fireworks graphical command / control, EST3 fire system and Hyperspikes high power speaker arrays that provide owners the capability to manage emergency events from a single-operator seat system.

This year's event took place in Boston, which is the home of NFPA and is rich in fire safety history. Nearly 30,000 people attended the conference. Paul Stoupa, director of vertical markets for Edwards/Kidde said, "The quality of the show attendees was excellent. The team was pleased with the interest shown by attendees and the opportunities for follow-up."

During the conference, Det-Tronics, Edwards and Kidde each held events for fire authorities, partners, consultants/influencers and end-users to demonstrate new products and system capabilities in presentations and one-on-one demonstrations.

The combination of comradery and learning helped create greater awareness of the company's products and a positive experience for those in attendance.
